

Opus IVS Welcomes Protech Automotive Solutions as Premier Provider Within ADAS MAP Pro Network

Partnership connects Opus IVS technology with Protech's nationwide diagnostic and calibration capabilities, simplifying access to specialized services for repairers.

Dexter, MI – 10/21/2026 – Opus IVS today announced that Protech Automotive Solutions has joined its ADAS MAP Pro connected provider network as a Premier ADAS Calibration Provider, expanding access to Protech's nationwide diagnostic and calibration service capabilities for collision repairers.

The Premier Provider designation recognizes Protech's extensive technical expertise, established national service network and ability to support repairers with increasingly complex vehicle diagnostics and ADAS calibration requirements. As part of the ADAS MAP Pro network, Protech brings a comprehensive range of advanced automotive services to repair facilities seeking reliable, specialized support.

As vehicle technology continues to evolve, collision repairers face growing demands for advanced diagnostics, ADAS calibrations and specialized technical expertise. The partnership brings together Opus' technology for identifying advanced service requirements with Protech's field expertise and national service network, helping repairers more easily connect with the services needed to complete the work.

"Vehicle technology is becoming increasingly complex, and repairers need solutions that help them manage that complexity efficiently," said **Ryan Simpson, President of Opus IVS**. "Protech brings extensive technical expertise, nationwide reach and established service capabilities to our connected provider network. Their Premier Provider designation reflects those strengths and our shared commitment to helping repairers access the specialized services they need."

Through the partnership, Opus IVS customers can access Protech's comprehensive service capabilities, including advanced vehicle diagnostics, ADAS calibrations, module programming and mobile field services. Protech's flexible service model helps reduce coordination challenges, minimize unnecessary vehicle movement and keep repair work moving efficiently.

"For independent repairers, keeping pace with increasingly sophisticated vehicle technology can be challenging, especially when the right expertise or equipment isn't readily available,"

said **Jon Webber, Senior Vice President of Protech Automotive Solutions**. "That's where Protech makes a difference. We bring advanced diagnostic and calibration capabilities directly to the repair process, helping shops expand what they can confidently take on without having to build every capability themselves. Our partnership with Opus makes it easier for repairers to connect with those services when and where they need them."

By connecting Opus' technology with Protech's service capabilities, the partnership provides repairers with a more streamlined pathway from identifying advanced vehicle service requirements to accessing the expertise needed to address them.

About Opus IVS

Opus IVS brings together DrewTech, Autologic, Farsight, BlueLink, Autotechcelerators and AutoEnginuity to serve more than 65,000 repair shops and dealerships worldwide. Its technology covers OEM-endorsed diagnostics, remote flash programming, pre- and post-repair scanning, ADAS calibrations and vehicle networks. Shops can also reach more than 100 brand-specific Dealer Master Technicians for trouble code interpretation, OEM service procedures and diagnostic support. Opus IVS operates alongside sister brands asTech and BlueDriver.
